

Advancement is the reason and purpose or cause,

Of why continuing to progress and abide by the laws;

In which we can rise and reach out through to space,

Where we leave the earths sky or atmospheres trace.

.

Rockets are a means or way to reach out and do this,

That we can fly to the moon or planets not to miss;

The objectives to find a new place to inhabit or dwell,

Where we can go on living as the earth goes to hell.

.

A beautiful idea to reach out and to travel and search,

Like birds heading skyward and fly off of their perch;

And the magic of mystery is to uncover the unknown,

As God leads all history from where the winds were blown.

.

The brilliance of technology enables us to move forward,

Far beyond limits and going off into space or toward;

A new life and a challenge for us all to now master,

That the distance to travel, rockets can now do faster.

.

So rockets are now the right direction for the future,

Where civilization transcends to places going further;

With imaginations only restricted by a definite reality,

That the end of infinity is only our eternity's ideality.

.

It all looks a bit bleak out on the horizon at this time,

With telescopes telling we're so far from the sublime;

Perhaps we can take off and just orbit around the earth,

This place that we love and this home that is worth.

.

Signed,

Food for thought.
