

The aging process means that life is getting older,

And faith and progress are getting silvery and golder;

But life means a lot more than money and riches,

There's the trees and the birds, clothes and stitches.

.

The highest form of life of course is the human being,

Animals only need some food for what their seeing;

There's insects, arachnids, reptiles and amphibians,

Cells make organisms, plants or trees are vegetation.

.

Grass grows gradually greener and sky is the limit,

On the other side of the hill it meanders down river;

So life is a dream and the beauty is to be seen,

For the actualizing brilliant mind in the I of the scene.

.

There's famine and poverty when life is in despair,

When people want more things and no-one does care;

The alternative meaning can be opposite to the truth,

So blatantly obvious that it seems to find living proof.

.

The fields flower in season and change is around,

As long as we learn to keep our heads above ground;

In biology and genetics life is still formed or found,

So the intellectual property is life hatched and born.

.

The garden will bloom, blossom and flourish in time,

That the answer to creation is evolution and rhyme;

For the revolution of the earth sustains life in all,

From the work that gets done till Gods made his call.

.Signed,

A hell of an idea.
