

Well what is probable and what is not,
If we think the world is round, now quite a lot;
A light goes on at the flick of a switch,
As the earth's so big, would it crumble at a twitch?

All these things we must consider to stay alert,
We might be right or wrong and I'll give you my shirt;
But indeed we need to speculate on probability,
And when we do we'll find it quite a responsibility.

Probability is to reason out things as of why,
So we can answer the question of what's beyond the sky;
The problem in creating probability is to see if we're right,
Which brings us back to that thing about the light.

Now when we sum it all up, will we know the truth,
Or live out our lives without reason or proof;
Probability leads us to think if that will really happen,
But I think most of us will find were caught napping.
